Asia Resilient Cities

The USAID-funded Asia Resilient Cities (ARC) Project will address cross-cutting urban development challenges in secondary cities in Asia by promoting sustainable urban growth; supporting resilient, low-carbon urban infrastructure; and integrating climate change and environmentally-conscious approaches.

ARC will partner with cities to create more resilient and livable environments in the face of shocks. This includes working through the steps of the USAID Resilience Conceptual Framework (absorb, adapt, transform) to overcome challenges and sustain results. ARC and its partner cities will achieve and sustain resilience by fostering relationships between residents, governments, and other stakeholders that will endure after the project.

Communities are a city's biggest resource for making change. ARC will collaborate with residents to set the city agenda, strengthen the economy, and advocate for community needs. In addition, ARC will cultivate human resources in city government, the business community, other donor projects, and civil society.
