Each day, plastics leak into the waters around the more than 7,500 islands of the Philippines, driven by rising production and consumption of single-use plastics. USAID’s Clean Cities, Blue Ocean (CCBO) program is engaging across the Philippines to stop the flow of plastic pollution to the waters within and surrounding the country.

- Across Metro Manila, USAID is empowering women to advance in the waste sector through training, mentorship, and the opportunity to receive funding to establish or expand entrepreneurial waste businesses.
- In Pasig City, USAID is transforming local organics and single-use plastics into usable products, such as ocean and climate change-friendly compost and eco-bricks, through a community “Eco Hub.”
- In Parañaque City, a new USAID-supported “Eco-Ikot” (Eco-Circular) Center collects and enables low-value plastics and other waste to be made into new recycled plastic goods, creates jobs for local women, and serves as a community education center.
- In Manila City, USAID supported women-owned sari-sari convenience stores to earn additional income as local “waste to cash” stations that buy plastic waste from the community and put it back into a developing local circular economy. USAID partners are also building local government capacity and helping local waste collectors to establish profitable, sustainable waste businesses.

Details on program activities, implementing partners, and grantees can be found on the program website, listed below.
OUR LOCAL SYSTEMS APPROACH

USAID’s engagement in the Philippines comes at a pivotal time, supporting action to avert irreversible damage to our oceans, reduce plastic and waste-linked contributions to the climate crisis, and advance other priority development objectives. The program leverages local, national and international technical expertise, paired with its grants program to test, scale, and share locally-led, innovative, and proven solutions. Where possible, the program learns from and expands upon the success of proven initiatives by local government, non-governmental organizations, and the USAID Municipal Waste and Recycling Program (2016-2021).

The program’s work supports USAID’s Five Building Blocks for Reduced Ocean Plastic Pollution:

1. Data-driven policies for circularity
2. Effective solid waste services and investment
3. Green jobs and local innovations
4. Sustained behavior change to reduce single-use plastics
5. An inclusive, just, and equitable system

IMPACTS AND RESULTS

In the Philippines, program impacts (to date) include:

- Over 150 tons of plastic and other low-value waste secured from leaking into the environment through recovery efforts that diverted material from landfills, while supporting local livelihoods and building circular economies.
- Over 950 individuals trained from local government, informal waste sector, and local organizations to build local capacity for solid waste management planning and programs.
- Formed partnerships with local governments; private sector partners, including Nestle Philippines and the Coca-Cola Foundation Philippines; and groups including the Metro Manila Development Authority and World Bank, to build sustainable, circular economies.
- Over $2.1 million in grant funding awarded to local partners to implement effective, locally-led solutions.
- Nearly 500,000 households, or about 2.1 million people, benefiting from improved waste services or programs with government entities as well as through local grantees.

ABOUT CLEAN CITIES, BLUE OCEAN

Clean Cities, Blue Ocean is USAID’s flagship program to combat ocean plastic pollution. The five-year (2019-2024), $53 million program works at the global level and in specific, rapidly urbanizing focal countries to target ocean plastics directly at their source. By strengthening waste management and advancing or building circular economies, city by city, USAID builds sustainable solutions that reduce ocean plastics while empowering vulnerable populations and mitigating pollution that affects human health and our climate. The program is implemented by Tetra Tech, in partnership with a consortium of organizations that include the International City/County Management Association and The Manoff Group. Other partners include national and local government, members of the private sector, non-governmental organizations, and local women’s and youth organizations.
